

Reddit API

Provides:

This API provides usage of reddit's pages' top posts. It gives you all the data, from the poster's name, to the date, to the actual post.

Key Provisioning:

Pain factor

(0=eazpz...5=nightmare): **2**

- No key needed

Quotas:

- 60 requests per minute per user account sign in

The Good:

- Can limit the number of posts you want
- Accesses any subreddit

The Bad:

- Poor documentation
- Not a lot of usage beyond just some fun reddit searching

The Ugly:

- The json output is very confusing with confusing variable names

Location: <https://www.reddit.com/r/worldnews/top.json?limit=5>
